biO<sub>2</sub>' Oxy-Mist Treatment System is unlike any other healing product I have used. It heals ulcers faster and it heals difficult to heal ulcers.

biO<sub>2</sub>' Oxy-Mist Treatment System is state-of-the-art. It combines wound healing factors and electrolytes in a formulation (Amino-Plex® formulation that is sprayed onto the wound utilizing topical oxygen as the delivery source) I have found to be efficacious, affordable and easy to use. I have healed resistant venous stasis ulcers that did not improve for months with other products in only a few weeks with biO<sub>2</sub>'s Oxy-Mist treatment system. Podiatrists with patients who have diabetic or venous stasis ulcers will find new success in treating these ulcers using the Oxy-Mist Treatment System.
